

## Design Brief III : Context Scenarios and Requirements

### *Objective*

Learn how to generate design context scenarios and use storytelling to creatively illustrate ideal user experience. Learn to generate constraints based on context scenarios.

### *Vision statement*

Vision statement is your solution statement for the design challenge. It echoes your DPS (design problem statement) and is based on your findings from the user interview process. Construct your vision statement with the prompt “XXX **helps users** (discover wines in places where they consume wines: parties, restaurants, meals at home)”, where XXX is your product name and “helps users” are the keywords you must include.

### *Context scenarios*

Brainstorm and generate context scenarios by describing ideal user experience using storytelling. Make sure these scenarios also refer to rich interactions with your ultimate interface without specifying the exact widgets users may use (this specific part is for next assignment).

Do not exceed 3 pages.

### *Task tree*

Organize the ideas generated in context scenarios by grouping them and ordering them. Construct your user’s task tree in a diagram.

### *Requirements extraction from your context scenario*

What are the data requirements and functional requirements? State them clearly.

### *Grading Rubric*

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b><i>Vision statement</i></b><br>Clearly state your vision statement. Use less than 100 words.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 15%  |
| <b><i>Context scenarios</i></b><br>Consider covering the following in your context scenarios: <ul style="list-style-type: none"><li>• In what setting(s) will the product be used?</li><li>• Will it be used for extended amounts of time?</li><li>• Is the persona frequently interrupted?</li><li>• Are multiple users involved in creating the experience?</li><li>• With what other products will it be used?</li><li>• <b>What primary activities does the persona need to perform to meet her goals?</b></li><li>• What is the expected end result of using the product?</li><li>• How much complexity is permissible, based on persona skill and frequency of use?</li></ul> Use less than 3 pages. | 50%  |
| <b><i>Task tree</i></b><br>A task tree contains a single root with multiple subtrees. The nodes of the task tree are ordered, reflecting the order with which users accomplish their tasks. Some subtrees also reflect different ways of achieving a higher level task. In this case, they don't reflect orders but different ways of achieving a higher level task. Use less than 1 page.                                                                                                                                                                                                                                                                                                                 | 20%  |
| <b><i>Requirements extraction from your context scenario</i></b><br>What are the data requirements and functional requirements? Use less than 1 page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 15%  |
| Total                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 100% |

### *Submission*

Please submit a report including the vision statement, the context scenarios, the task tree, and the data and function requirements on the due date.
